

ArtSorb is designed to improve the acoustics of meeting rooms, receptions, classrooms, restaurants and homes. It is particularly effective where there is sound reverberation or high levels of noise.

A choice of either printed fabric or plain colours ensures that the panels enhance the aesthetic of a room whilst absorbing sound predominantly in the speech frequency spectrum. Constructed of light weight materials the panels are easy to hang and available in a range of sizes.

Construction of many rooms involves a lot of hard reflective surfaces, this can cause high reverberation and mean low speech intelligibility, it may also cause amplification of noise, reducing speech privacy to adjoining spaces. For a relatively low cost this issue can be solved with ArtSorb.

Acoustix will help to specify the correct number and sizes of panels either shipping them directly or providing an installation service.

ARTSORB IN BUSINESS

In a commercial environment the printed image may be a corporate logo or product images. Much of the artwork that may be currently displayed can be digitally reproduced using a high quality printing process making the ArtSorb unique and bespoke. The four images, shown above, hanging in a two storey atrium were originally oil paintings commissioned by the company but digitally reproduced to make 3m x 3m acoustic absorbing art. The result is a calmer more comfortable environment for the two cafe areas, reception and informal meetings.

ARTSORB AT HOME

In the home the use of materials such as wood flooring can make rooms noisy and uncomfortable. In home cinemas the acoustics are crucial to the overall experience.

By adding ArtSorb the reflection of sound is reduced enhancing the function of the room. Add your own favourite photographs to enhance the visual effect.

Contact Acoustix for assistance in sizes required or to discuss specific requirements.

ArtSorb Acoustic Performance

ACOUSTIX

Acoustix has experience in solving acoustic issues, creating speech privacy and acoustic comfort. We are happy to advise on solutions and have a range of complimentary products.
